EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mina Alikani on 01/15/2004. The application has been amended as follows:

In the specification:

The abstract of the invention, beginning on page 13 in line 1, has been amended to the following:

A preparation and a method of making composite blastocysts (CBs) from aggregates of dissociated cells of non-viable pre-embryos are disclosed. The CB is characterized morphologically by having two distinct tissue types, the inner cell mass (ICM) and the trophectoderm (TE), and a blastocoelic cavity (BC). The method of making CBs is an aggregation process (AP) comprising inter alia the following steps: 1) dissociation of discarded pre-embryos; 2) isolation of single nucleated cells from dissociated discarded pre-embryos; 3) microsurgical encapsulation of several cells within a host zona pellucida or artificial aggregation with or without a non-zona vessel; and 5) primary culture of the cell aggregates for multiplication and differentiation of cells. One particularly advantageous embodiment is that the starting material is non-viable pre-embryos. Another advantageous embodiment is that the AP allows individual cells from non-viable pre-embryos to further multiply, and become integrated into CBs. The novel CBs and the novel aggregation process are disclosed.

In the claims:

Please cancel claims 1-8 and 10-14.

Claim 9 has been amended as follows:

9. A method of producing composite blastocysts comprising ~~the steps of~~:

- a) dissociation of non-viable mammalian pre-blastocyst embryos ~~pre-embryos~~ into non-nucleated and individual nucleated cells or groups of cells;
- b) isolation of individual mononucleated cells or groups of mononucleated cells from disaggregated non-viable pre-blastocyst embryos ~~pre-embryos~~;
- c) aggregation of isolated mononucleated cells or groups of mononucleated cells from non-viable pre-blastocyst embryos ~~pre-embryos~~ in a host zona pellucida; and
- d) culturing of the zona-encapsulated cell aggregates to allow multiplication ~~and differentiation~~ of cells to form a composite blastocyst.
